

Welcome to our office,

Your child will soon be coming for a full developmental vision analysis. This includes testing for vision deficits that can affect overall health, development, self-esteem, coordination, reading, writing, and school performance. To do this we will be assessing his/her eye focusing, eye tracking, eye coordination, and acuity. Enclosed you will find a new patient history form and other information about our office and our behavioral approach to vision care.

The office examination will take up enough time to permit a very complete optometric investigation of the problem, and should last about an hour. The fee for the testing is \$275.00. Should Dr. Fox feel that further testing would help to better develop a program of care, a separate appointment will be scheduled for a 2-hour perceptual evaluation. The fee for this appointment is \$375.00 and also includes a follow up appointment to discuss the detailed report of the findings, as well as the recommended program of care.

We look forward to meeting you.

Sincerely,

Robert S. Fox, O.D.
Fellow College of Optometric Vision Development
